

Automation Workflow v2

Fabiana Alves Ferreira

1. Workflow chosen

Draft, critique, and revise — applied to portfolio copy (proof statement, case studies), which was already classified as “I delegate to AI with review” in my workflow audit (FL-01, item 7).

2. Step diagram

3. Tool and configuration

Run inside the “Portfólio FlyRank AI” Claude Project, already configured since FL-01 with my identity, proof statement, honest sentence, and the Chile proof story as project knowledge — no new tool, no extra cost.

Structured prompt used in every run:

For each raw fact below, run in this order: (1) DRAFT — write a short version (2-4 sentences) of portfolio copy from the fact, in the voice defined in the Identity Kit, without inventing any detail not present in the fact. (2) CRITIQUE — flag in a short list: generic AI phrasing, details that look invented, and where the tone drifts from the direct, unembellished voice. (3) REVISE — rewrite fixing every point from the critique. (4) HUMAN CHECK — list what only Fabiana can confirm before publishing.

4. Five real runs

Run 1 — Building the portfolio with AI

Draft/Rascunho: I built my entire portfolio with the help of generative AI, from the HTML/CSS structure to the form logic and SEO. Along the way, I found and fixed several real issues — inconsistent alignment, insufficient contrast, a duplicate-submission bug in the form — always reviewing each change before publishing.

Critique/Crítica: (a) “generative AI” is generic jargon; (b) no invented details; (c) tone is fine, but stronger with concrete examples instead of just categories.

Revision/Revisão: I built my portfolio with Claude, but reviewed every line before publishing. Along the way I found real bugs — text glued together with no spacing, a link pointing to the wrong version of my resume, a form that let the same message be sent twice — and each fix only went live after I confirmed it actually solved the problem.

Human check/Checagem humana: Confirm whether to name the specific bugs publicly, or keep it more general.

Run 2 — Fixing the Chile technical detail

Draft/Rascunho: While reviewing the Chile case text, I realized I'd gotten a technical detail wrong: I described each house as having its own meter, when in fact multiple houses could share one meter on the same lot. I corrected the text to reflect the project's real logic.

Critique/Crítica: (a) no AI jargon; (b) no invented details; (c) direct tone, fine.

Revision/Revisão: No changes needed — passed the critique on the first pass.

Human check/Checagem humana: None — fact already verified by her when it happened.

Run 3 — Feedback from Glayce and Patricia

Draft/Rascunho: I sent my portfolio to Glayce Jaine (Business Analyst at CI&T;) and Patricia Fernandes (AI Engineer at Eldorado) before publishing. Both confirmed they understood what I do, and Glayce said the work would already be enough for roles at her company — I just don't qualify yet since I'm mid-degree, not because of quality.

Critique/Crítica: (a) no generality; (b) no invented details; (c) final sentence ran a bit long.

Revision/Revisão: I sent the portfolio to Glayce Jaine (Business Analyst at CI&T;) and Patricia Fernandes (AI Engineer at Eldorado). Both understood what I do without needing it explained. Glayce went further: she said the work would already be enough for roles at her company — the only barrier today is that I haven't finished my degree yet, not the quality of what I built.

Human check/Checagem humana: Confirm with Glayce and Patricia that it's okay to name them, their title, and company publicly.

Run 4 — Not copying FlyRank's sidebar

Draft/Rascunho: I considered imitating the FlyRank platform's sidebar menu on my own portfolio, but decided against it — a 4-page portfolio doesn't need dashboard-level complexity, and a sidebar there would be decoration, not function.

Critique/Crítica: (a) no jargon; (b) faithful to what happened; (c) tone fine.

Revision/Revisão: No changes needed.

Human check/Checagem humana: None.

Run 5 — Contact form email bug

Draft/Rascunho: After setting up my contact form, I found that notifications weren't arriving in my Outlook email — they vanished with no explanation, not even in spam. I switched to a test Gmail, it worked instantly, confirming it was a block on Outlook's side, not a system failure.

Critique/Crítica: (a) no generality; (b) faithful to the original account; (c) direct tone, good.

Revision/Revisão: No changes needed.

Human check/Checagem humana: None.

5. Time estimate

	Manual (solo)	With the workflow
Per story	~15–20 min (write, re-read, rewrite)	~3 min (paste the fact, read and verify the result)
5 stories	~75–100 min	~15 min

Estimated savings: roughly 80–85%, already accounting for the original Claude Project setup cost (done once, in FL-01, and reused here at no extra cost).

6. Failure points and required human review

- The workflow never verifies facts on its own — dates, numbers, and third-party names always need my confirmation before publishing (see “human check” in every run).
- When the raw fact involves another person's name (run 3), the workflow has no way of knowing whether they authorized being named publicly — that's necessarily human.
- For facts that were already well-described and specific (runs 2, 4, and 5), the critique found nothing to fix — the draft came out good already. The workflow pays off more when the raw fact is looser/more generic (run 1), where there's more jargon to cut.
- The workflow never decides on its own whether a piece of text should go into the public portfolio — that stays my call, run by run.
