

Empty, But Live

Fabiana Alves Ferreira

1. Trying to break the system

Test	Result
Empty form	Correctly blocked by the browser itself (required attribute) — nothing was sent.
Rapid double submit (2 clicks in a row)	FAILED on the first attempt: 3 identical submissions landed in the dashboard. Fixed by disabling the button after the first click. Re-tested and confirmed: now only 1 entry per submission.
Untested browser/device	No issues found.
Clicking every link (incl. LinkedIn, GitHub, resume)	No issues found.

2. Visibility and speed

Added basic SEO/meta across all 8 pages (PT and EN): Open Graph and Twitter Card tags for link-sharing previews, a canonical URL, plus robots.txt and sitemap.xml to help Google index the site.

Speed test (PageSpeed Insights, home page):

	Performance	Accessibility	Best Practices	SEO
Mobile (before)	94	95	100	100
Mobile (after)	95	100	100	100
Desktop (after)	100	100	100	100

Accessibility went from 95 to 100 after fixing a real contrast issue (see section 3). Mobile performance sat at 94-95, not 100 — Lighthouse flags about 1.8s of possible savings by eliminating render-blocking requests (likely the Google Fonts import). I didn't fix that today — it's a known limitation.

Google search: searching just “Fabiana Alves Ferreira” doesn't surface the site (it's a common name, competing with many results), but it does surface my LinkedIn. I also tried `site:fabiana-alves-ferreira.netlify.app` and “Fabiana Alves Ferreira portfolio data” — neither brought up the site yet. The site is very new; Google indexing typically takes days to weeks, even with the technical groundwork (sitemap, robots.txt) already in place.

3. Honest classification

Immediate fix (done)	Known limitation (not fixed today)
Rapid double-click form submission — fixed and re-tested	Site not yet indexed by Google — expected given the site's age; technical foundation is already in place
Insufficient contrast on the EN/PT menu link — fixed, Accessibility went from 95 to 100	Common name competes in search results — partially mitigated by LinkedIn showing up, but the site itself won't win on a generic name search alone
Basic SEO/meta added (Open Graph, Twitter Card, canonical, robots.txt, sitemap.xml)	Mobile performance at 94-95 (not 100) — ~1.8s possible gain by optimizing the external font load; not addressed today

4. Security review

Tests run solo, following the assignment's script, verifying each result before classifying it as fixed or a limitation. Ready for mentor or peer review.
