

AI Workflow Audit

Fabiana Alves Ferreira

1. Recurring weekly tasks

#	Recurring task	Classification	Rationale (1 line)
1	Cleaning job (Mon, Tue, Thu, Fri, ~28h/week)	I do it alone	It's manual, on-site work; there is no applicable AI task here.
2	Attending Univesp classes/lectures	I do it alone	Understanding the material has to be built by me; AI doesn't replace the learning process.
3	Working through Python/SQL coursework exercises	I collaborate with AI	I use AI to clear up doubts and review logic, but I write the code myself first.
4	Working on the PI2 and PI4 capstone projects	I collaborate with AI	AI helps structure documentation and review weekly/biweekly deliverables, but the project's technical decisions are mine.
5	Researching and deciding which jobs to apply to	I do it alone	It's a strategic decision about my career; only I know what makes sense for me right now.
6	Tailoring my resume for a specific job	I collaborate with AI	AI helps align the language with the role, but the final call on what to keep is mine.
7	Writing portfolio copy (proof statement, case studies)	I delegate to AI with review	AI drafts from my real story; I review to make sure it sounds like me, not generic.
8	Formatting documents and reports (docx, tables)	I fully automate	It's a low-risk mechanical task; formatting errors are easy to spot and fix afterward.
9	Simulating technical/behavioral interview questions	I collaborate with AI	AI generates realistic questions, but the quality of my answers depends only on my own preparation.
10	Organizing class notes and summaries	I delegate to AI with review	AI summarizes quickly, but I check whether any important concept was oversimplified.
11	Replying to recruiter emails and LinkedIn messages	I collaborate with AI	I use AI to draft a reply, but I adjust the tone to keep my personal voice in the conversation.
12	Practicing dashboards in Power BI	I collaborate with AI	I ask for visualization suggestions, but the build and design decisions are mine.
13	Reading news/articles on data and AI trends	I do it alone	I want to form my own critical opinion about the field, not outsource the curation.
14	Planning the week (fitting in cleaning job, Univesp, PI2/PI4, and the internship)	I collaborate with AI	AI helps lay out the schedule, but the real pace and last-minute adjustments are mine.
15	Reviewing spreadsheets/data for inconsistencies	I do it alone	This is exactly the skill I'm proving in my portfolio — I can't outsource my own judgment.

2. Toolkit

- ☒ Claude account created (claude.ai)
- ☒ ChatGPT account created (chat.openai.com)
- ☒ Anthropic Academy account created and enrolled in AI Fluency: Framework & Foundations
- ☒ Course Module 1 completed

3. Claude Project configured

3.1 Project overview

Claude Project “Portfólio FlyRank AI” created in claude.ai, with the AI_Workflow_Audit_Fabiana_EN.docx, Semana_Modelo_Fabiana.docx, and resume PDF attached as project knowledge.

Figure 1 — Project overview with attached files.

3.2 Custom instructions (full text)

The screenshots below show the complete custom instructions configured for the project, covering identity, proof statement, honest sentence, the Chile/TeleDesign proof story, target audience, reference job openings, and working guidelines for Claude.

Figure 2 — Instructions (part 1 of 3): identity, proof statement, and honest sentence.

Figure 3 — Instructions (part 2 of 3): the Chile / TeleDesign proof story, target audience, and desired action.

Figure 4 — Instructions (part 3 of 3): reference job openings and working guidelines for Claude.

4. Three target tasks (reused in FL-02 to FL-04)

Target task (reused in FL-02 to FL-04)	What "done well" means
Tailoring my resume for a specific job	The resume matches the role's real keywords (e.g., Data Quality, ETL, SQL) without inventing or exaggerating experience; the edit takes under 20 minutes; every change stays true to what actually happened.
Writing portfolio copy (proof statement, case studies)	The final text sounds like me, not generic AI; the Chile story keeps the facts exactly as they happened; review confirms no detail was invented or embellished.
Simulating technical/behavioral interview questions	The simulation points out at least one real weakness in my answer each round; it covers both technical (SQL, data quality) and behavioral (the proof story) questions; I get specific, not generic, feedback.
