

What Are You Proving?

Fabiana Alves Ferreira

Proof statement

I identify inconsistencies in raw data and verify information against reliable sources before they cause rework or real losses — like when I validated illegible addresses for a network project in Chile, street by street, using Google Earth, preventing technicians from having to return to the field. I'm demonstrating this to a data manager evaluating candidates for a junior role, so that he schedules a conversation with me.

One-line rationale

A resume or LinkedIn profile can list that I worked with data and SAP — but they can't prove that, faced with ambiguous information and no way to confirm it with the source, I don't move forward until I'm certain; my portfolio exists to show that story, not just mention it.
