

The Throughline: Content Map & CTAs

Fabiana Alves Ferreira

1. One-line statement

I verify data before it turns into real loss.

Generated from 10 options (see working conversation). Versions mentioning 'costs time' were dropped for implying slowness — the point is preventing loss, not causing delay.

2. Content map

Home

Section	Content / Case	Named CTA
Hero	One-line statement ("I verify data before it turns into real loss") + short subtext inviting the visitor to the Chile case	"See the Chile case" → Proof/Case Study
Strongest case preview	Chile case (3-line summary: problem, what I did, result)	"Read the full case" → Proof/Case Study
Secondary case preview	Brigadeira Stock (short summary)	"See this case" → Proof/Case Study (Brigadeira Stock anchor)

Proof / Case Study

Section	Content / Case	Named CTA
Case 1 (strongest, first)	Chile / TeleDesign — problem, what I did, result, what I'd do differently, before/after	"Schedule a conversation" → Contact (main action)
Case 2	Brigadeira Stock — problem, what I did, result (prototype, with an honest caveat), + screenshots: code and running site	"Schedule a conversation" → Contact (main action)
Before / After	Generic AI line vs. edited version comparison	— (supporting element, no CTA of its own)

About

Section	Content / Case	Named CTA
Bio	One of the already-approved options (see Framed Cases doc)	—
Currently applying this	Bridge to Projeto Integrador I (Brigadeira Stock) + Univesp	"View full resume" → resume link

Contact

Section	Content / Case	Named CTA
Contact blurb	One of the already-approved options (see Framed Cases doc)	"Schedule a conversation" → email (Week 1 main action)
Links	Email, LinkedIn, resume	—

Every CTA converges on the same main action defined in Week 1: having a data manager schedule a conversation with me.

3. Items still to collect

- Public demo link for Brigadeira Stock — the project currently only runs on localhost; still need to decide between hosting a public version, recording a short demo video, or relying on the already-approved screenshots.
- Specific GitHub repository link for the Brigadeira Stock project — my general GitHub is already on my resume (github.com/FabianaAFerreira), but the exact repo for this project still needs to be confirmed/linked.
- No testimonial available yet — neither from the PI1 advisor nor from the friend who owns the confectionery business. Not required, but would strengthen the case if collected someday.
- Concrete numbers for the Chile case — the result today is qualitative ("no field rework"); I don't have an exact metric (e.g., number of addresses verified, time saved) and won't invent one.
- Definitively confirm the resume link (Google Docs) opens without requiring login, by testing in an incognito browser tab.
- The Metaltex case (freight/invoicing) has not been turned into a full case yet — decided to leave it out for now (see Week 2); can be revisited later if it makes sense.
