

Leave Your Mark: Domain + Badge

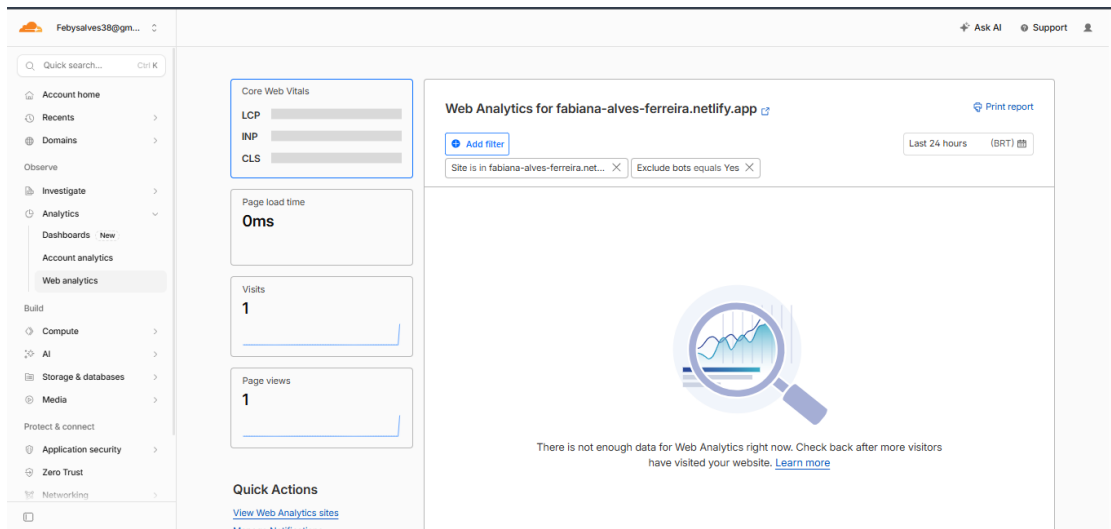

Fabiana Alves Ferreira

1. Domain

I chose to keep the clean, free Netlify subdomain — **fabiana-alves-ferreira.netlify.app** — instead of buying a custom domain. This is the alternative the assignment itself accepts when the budget is zero, which is my situation right now. The address already follows the clean naming pattern required since the PF-04 assignment (name only, no random numbers), so it meets the spirit of the requirement even without a paid domain.

2. Free analytics

Installed Cloudflare Web Analytics — free, no visit limits, no cookies used (no consent banner needed). The snippet was added to all 10 pages of the site (4 in Portuguese, 4 in English, plus the 2 contact-form thank-you pages). Confirmed working with one real visit recorded:

Cloudflare Web Analytics dashboard showing 1 real visit and 1 page view, captured after publishing.

3. Site hygiene

- Share preview (Open Graph/Twitter Card) tested by pasting the link into WhatsApp — correct photo, title, and description appeared.
- Favicon (FAF monogram) present on every page since the site was first built.
- Page titles reviewed and specific per page (not repeating the same title site-wide).
- Site re-opened on a real phone after the latest deploy — no issues.

4. Completion badge

Not yet installed — and this is expected, not an oversight. Per the PF-04 assignment brief itself, “instructions and the badge file will be provided after your final project is approved.” I'll add the badge to the footer as soon as it's made available, along with a link to the verification page.

5. Deliverable

Live URL (HTTPS): <https://fabiana-alves-ferreira.netlify.app/>

Analytics: Cloudflare Web Analytics, installed and confirmed (see screenshot above).

Hygiene: confirmed live in production.

Badge: pending release from the program, will be installed once available.
