

Survive the Critic

Fabiana Alves Ferreira

1. Who reviewed it

Glance Jaïne — Senior Business Analyst at CI&T; Product Owner | Product Management | Business Analysis | Project Management (LinkedIn: [linkedin.com/in/glancejaïne](https://www.linkedin.com/in/glancejaïne)). Received the portfolio link and the Chapter 1 proof statement.

Patricia Fernandes — AI Integration Engineer at Instituto de Pesquisas Eldorado (RAG & Generative AI solutions, robotics and applied research). Received the portfolio link, the proof statement, and a voice message explaining the project.

2. The two required questions

“In ten seconds, what do I do?”

Glance understood the page's purpose without difficulty. She said the work “looks very good” and that it's clear what was done, with one caveat: the Chile case description felt “too high-level, without detail” — but she made a point of saying that's a minor detail, and overall it's excellent.

“Would you believe I'm good at this?”

Yes, with an important nuance worth recording precisely: Glance said the work demonstrates real competence, to the point of mentioning openings at her company. The barrier that exists today isn't about quality — it's academic eligibility (an internship at her company requires being in your final year; a full-time CLT role requires a completed degree). I'm in my 3rd year, finishing my 5th semester, outside both criteria for now. In other words: the portfolio passed her credibility test — the limitation is my academic stage, not what was built.

3. Full feedback, honestly classified

Needs fixing (required)	Nice to have (optional, later)
GitHub profile photo had a pet in it, not a professional photo (Glance)	Chile case description could use more detail — currently too high-level (Glance, her own caveat: “this is just a minor detail”)
Pinned repository (BrigadeiraStock) on GitHub had an incorrect/generic description unrelated to the actual project (found during review, not by the reviewers)	Organize or archive course-exercise repositories on GitHub, which show up alongside the real projects (Patricia, informal comment)
Spacing between the Chile image caption and the following heading on the Proof page (Glance)	

4. Evidence the required fixes were made

- GitHub photo replaced with a professional photo, no pet. Confirmed live on the profile.
- BrigadeiraStock repository description corrected on GitHub, now describes the actual project (an inventory control system), not the previous generic text.
- Spacing between image captions and following headings fixed via a global CSS rule — applied across the whole site (PT and EN), not just the Chile page.

5. How I handled the feedback

I didn't defend myself at any point in either conversation — just said thank you and listened. Where the feedback pointed to something real and fixable (the photo, the spacing), I fixed it. Where it was a suggestion for later (more detail on the Chile case, organizing old repositories), I acknowledged it as valid without treating it as urgent, since the reviewers themselves made that distinction.
